

YOUR PATHWAY INTELLIGENCE REPORT

Erasmus Mundus is your strongest research lane right now

63%

evidence profile

developing confidence

Prepared for Ayesha. This is a prioritized starting point, not an admission prediction. The system has separated what you entered, what it derived, and what still needs an official source.

EXECUTIVE SNAPSHOT

What the system understands now

ACADEMIC	Four-year bachelor's degree 85% planning signal
GOAL	Taught master's September 2027
FUNDING	full funding PKR 500,000
EVIDENCE	IELTS declared

HIGHEST-IMPACT MOVE

Complete your academic evidence

Add transcript, degree status and grading-scale evidence before any programme is treated as verified.

DECISION PROFILE

Readiness by decision area

Preparation signals only. These scores do not predict admission, scholarship or visa outcomes.

Academic foundation

80/100

85% internal planning signal from the declared scale.

Next: Attach transcript and grading-scale evidence.

Language evidence

78/100

IELTS 7 declared, not yet document-verified.

Next: Upload the official score report.

Funding feasibility

35/100

full funding dependency recorded.

Next: Build a scholarship-first portfolio with a fallback lane.

Evidence coverage

62/100

1 research or project evidence type declared.

Next: Convert every declared claim into a named document or proof item.

Execution capacity

68/100

8 focused hours are available each week.

Next: Run a weekly evidence and deadline review.

EVIDENCE GAPS

What prevents confirmation

- Programme-specific academic threshold
- Official degree and grading-scale evidence
- Award-specific funding eligibility

PATHWAY COMPARISON

Research lanes with open conditions visible

The order reflects current fit and feasibility. It is not a league table or a guarantee.

01 Erasmus Mundus

strong lane | conditional

Consortium-led, scholarship-dependent portfolio lane

- Why: Your funding dependency makes fully funded consortium routes strategically important.
- Why: Your declared research/project evidence may strengthen programme fit.
- Open: No universal Erasmus Mundus rule can confirm eligibility across all consortia.

Next move: Identify two live consortia in your field and map their exact evidence requirements.

02 Germany

strong lane | conditional

Programme-fit and lower-tuition exploration lane

- Why: Potentially lower tuition makes this route relevant under funding pressure.
- Why: Computing and information technology can be searched against structured programme subject requirements.
- Open: Degree equivalence, subject credits and document format must be verified per programme.

Next move: Create a DAAD/HRK-backed shortlist and record subject-credit requirements.

03 United States

strong lane | unknown

Graduate school + assistantship and fellowship lane

- Why: 85% internal academic planning signal from your original grading scale.
- Why: Your funding position makes scholarships a critical dependency.
- Open: Scholarship eligibility and work-history rules must be evaluated separately from admission.

Next move: Verify three suitable courses before checking scholarship dependencies.

EXECUTION PLAN

What to do next and why it matters

1

TODAY | CRITICAL IMPACT

Complete your academic evidence

Add transcript, degree status and grading-scale evidence before any programme is treated as verified.

2

THIS WEEK | HIGH IMPACT

Research your first six programmes

Start with two options in each suggested lane. Keep official source, intake and requirement evidence attached.

3

NEXT | MEDIUM IMPACT

Build three funding scenarios

Separate fully funded, partially funded and personal-contribution pathways before making a final shortlist.

4

TODAY | CRITICAL IMPACT

Resolve academic evidence pack

Erasmus Mundus Data and AI research lane: Transcript, award and grading context. A source-backed requirement cannot be resolved from the current profile.

5

THIS WEEK | CRITICAL IMPACT

Resolve course and credit mapping

MSc Artificial Intelligence: Official course descriptions and credits. A source-backed requirement cannot be resolved from the current profile.

6

NEXT | CRITICAL IMPACT

Resolve territory and cycle eligibility

UK leadership scholarship research lane: Confirmed on the current official cycle. Nationality is declared; the current award cycle must confirm territory eligibility.

METHOD AND SAFEGUARDS

How this report was formed

- Answers were validated and normalized.
- Hard eligibility rules ran before preference ranking.
- Funding, deadline and evidence feasibility shaped research priority.
- Unknown facts remained visible and became tasks.
- Academic normalization is an internal planning aid, not an official equivalency.
- A route remains conditional or unknown until programme-specific sources are attached.
- The system does not predict admission, scholarship or visa outcomes.

RECOMMENDATION AUDIT

Source-aware and reproducible

14 rules evaluated: 5 passed, 9 unresolved, 0 failed.

- Profile normalized using education-intelligence-3.0.0.
- 14 programme and scholarship requirements evaluated.
- 9 conditions remained open because evidence or a current source was missing.
- Research priority was calculated separately from admission and scholarship outcomes.

PROGRAMME EVIDENCE

Top evaluated opportunities

Erasmus Mundus Data and AI research lane

Consortium-specific application | Europe | priority 75 | confidence 37%

MSc Artificial Intelligence

Saarland University | Germany | priority 63 | confidence 41%

UK leadership scholarship research lane

Official award cycle required | United Kingdom | priority 60 | confidence 36%

MSc Data Science and Analytics

University of Leeds | United Kingdom | priority 57 | confidence 40%
